

Reciprocating Saw

JR003G

40V Max • XGT • AFT • XPT

JR003G is a reciprocating saw equipped with a chain vise, powered by a 40V Max XGT Li-Ion battery.

Makita JR003G is a professional-grade 40V Max XGT Brushless Cordless Reciprocating Saw specifically engineered for high-precision cutting of large-diameter pipes.

531 x 103 x 152 mm (with Vise)

4.9 kg (without battery) (with vise)

USER BENEFITS

- **Integrated Chain Vise:** Features a built-in chain vise mechanism that securely clamps workpieces, significantly improving cutting accuracy and stability for pipes up to \varnothing 220 mm (8-5/8") in diameter.
- **Dual-Purpose Versatility:** While optimized for pipe cutting with the chain vise, it can also be converted into a standard reciprocating saw by attaching a front grip and an optional blade clamp for general demolition tasks.
- **High Performance:** Powered by a 40V Max XGT battery and a brushless (BL) motor, it delivers excellent cutting efficiency and maintains a constant speed even under heavy load.
- **Durability:** Enhanced structural rigidity around the crank mechanism provides durability that is reportedly 50% greater than competing models.
- **Extreme Protection:** Equipped with XPT (eXtreme Protection Technology), which is engineered for increased dust and water resistance in harsh jobsite conditions.
- **User Benefits:** According to users, the tool offers very low vibration for reduced operator fatigue and a fast, tool-free blade change system.
